

## Press release

### **Globecast Expands Cable Content Distribution in the US with SES Video at Centre of the Arc**

Globecast signs two capacity deals with SES Video to deliver content for cable networks across the US market

Luxembourg, 14th September 2017 – [Globecast](#), a leading global solutions provider for media, has doubled its SES satellite capacity at the heart of North America’s leading cable neighbourhood to expand content distribution services to dozens of US cable networks.

As part of the new agreement announced by SES, Globecast will be utilizing two additional full transponders aboard the SES-1 satellite to deliver packaged programming from content providers to cable systems across the continental US. Globecast already relies on a third transponder on SES-1 to meet the growing demand among dozens of cable networks and broadcasters for content distribution throughout the region.

“Globecast is building much of its regional and global content distribution strategy using SES’s North American cable neighbourhood, which is where the leading cable networks reside and where our clients have the best possible cable penetration,” explained Eddie Ferraro, Managing Director of Globecast Americas. “We’ve collaborated closely with SES for many years, always focused on developing tailored turnkey media management and distribution solutions for our customers in an evolving market. SES’s expertise and reliability play a pivotal role in our ability to grow our business in the demanding and all-important North American media market.”

In a separate agreement, Globecast has renewed a 36 MHz transponder on the SES-3 satellite, its fourth transponder on the Centre of the Arc cable distribution platform, home to major media and entertainment leaders such as Discovery, Scripps Networks Interactive, HSN, and Viacom. SES-1 and SES-3, together with SES’s AMC-18 satellite, form what has fast become the sweet spot for regional content delivery and the backbone for much of Globecast’s media delivery solution.

“SES continues to invest in a robust global network of satellites and ground infrastructure designed to help media management innovators like Globecast create solutions to customer challenges,” said Steve Bunke, Vice President of SES Video in North America. “Just like Globecast, SES has built its businesses on customer-centric principles and strategies, which are clearly demonstrated at the Centre of the Arc – where Globecast and other leading media management companies are differentiating their services with unrivalled reach and cable penetration.”
